

PERF Remediation Workshop 2010

Dates: September 8, 9 2010

Location: BP offices in La Palma, California

The third annual PERF remediation workshop will be hosted this year by BP in their offices in La Palma, California. The past two workshops have been attended by approximately 50 people that included representatives from the oil industry, consulting firms and laboratories.

Topics covered in the first workshop [in 2008](#) were:

Source characterization tools; In-Situ Chemical Oxidation, liquid reagents and ozone sparging; Innovative tools to monitor remediation processes; and Soil Remediation.

The second workshop [in 2009](#) focused on three issues:

phytoremediation/constructed wetlands; contaminated sediments; and vapor intrusion.

This year's agenda will focus on two topics:

TBA-plume lengths, clean up levels, remediation options, case studies

Biofuels-effect on plume lengths and remediation approaches, vapor pathway issues, and case studies

Agenda is currently being developed and will be posted on the PERF website (perf.org) by August 2. For more information contact Todd Ririe at todd.ririe@bp.com or 714-670-3062.
